

A summary of smoking at delivery data

Table 1: Smoking at time of delivery (SATOD) national data

	2014-15	2015-16
Core Cities		
Birmingham (West Midlands)	10.7	10.1
Bristol	11.1	10.1
Liverpool	16.2	16.1
Leeds (North, South & East, West)	11.4	10.6
Manchester (North, South, Central)	12.4	12.5
Newcastle / Gateshead	14.1	13.2
Nottingham (City, NE & W)	14.7	15.5
Sheffield	15.1	12.7
Yorkshire & the Humber		
Sheffield	15.1	12.7
Rotherham	18.3	18.1
Doncaster	20.5	12.9
Barnsley	20.4	17.6

Table 2: Smoking at time of delivery (SATOD) data by quarter 2015-16

	Women smoking at time of delivery				
	Q1	Q2	Q3	Q4	Year
Core Cities					
Birmingham (West Midlands)	8.9	10.0	10.1	8.9	10.1
Bristol	11.6	9.0	9.6	11.6	10.1
Liverpool	17.5	15.2	16.0	17.5	16.1
Leeds (North, South & East, West)	10.5	10.1	11.0	10.5	10.6
Manchester (North, South Central)	11.2	13.4	12.7	11.3	12.5
Newcastle / Gateshead	13.1	13.4	12.7	13.1	13.2
Nottingham (City, NE & W)	14.9	14.3	15.8	14.9	15.5
Sheffield	12.2	12.2	14.3	12.2	12.7
Yorkshire & the Humber					
Sheffield	12.2	12.2	14.3	12.2	12.7
Rotherham	18.4	16.6	19.3	18.4	18.1
Doncaster	15.6	11.6	11.2	15.6	12.9
Barnsley	12.3	16.3	17.1	19.9	17.6

Table 3: Sheffield CCG data

Year	Smokers	Births	SATOD (%)
2012-13	900	6458	13.94
2013-14	864	6276	13.71
2014-15	940	6252	15.01
2015-16	786	6264	12.55

Source: Originally Jessop Wing Maternity System (JMIS) then cleaned to reflect women from Sheffield CCG available at: <http://sthinfo/is/UserReports.aspx>

Explanatory notes:

Table 1 - shows data for the last 2 years by core city and Yorkshire & Humber

Table 2 - shows data by quarter for 2015-16 to demonstrate fluctuations

Table 3 - our data as collated locally, to show raw figures and demonstrate discrepancy from national data due to rounding

For Core Cities, some CCG data have been collated, e.g. Leeds and taken an average. There have been some changes to the way that areas are grouped over the years presented, but the groups have been kept consistent within each year.

Regional data

We remain the lowest for smoking at delivery, although Doncaster are catching up.

We also undertake CO monitoring throughout pregnancy, and aim to do it at admission in labour, although this is work in progress. This means that our data are likely to be more accurate (i.e. higher) than the 'self-reporting' which is prevalent in other areas.

We have also have an established service and our rates now reflect the "hard core" smokers with less room for reduction. This is why we continue to explore new ways of engaging with the population.
